New England's Finest

NURSERY STOCK

1941

RETAIL PRICE

LIST

LISTINGS: We have listed all material under its botanical name as given in *Standardized Plant Names*. Immediately following the botanical name, we have endeavored to give the average ultimate height that the plant may be expected to attain. Of course this will vary according to climatic and soil conditions.

See Index of Common Names on inside back cover.

PRICES: Prices in this book cancel all previous listings. Prices are based on our selection from first class nursery row material; individual selection of plants by customer, or specimen plants will carry an additional charge of 20%.

GUARANTEE AND RESPONSIBILITY: We cannot guarantee stock planted out of season, nor can we guarantee stock destroyed by drought, hail, winter injury or acts beyond our control. In no case will we accept any monetary responsibility on the loss of plant material, but we assure our customers that all just complaints will be cheerfully rectified with proper replacements at the earliest favorable planting time.

DELIVERY: All material sold F.O.B. Nursery, no extra charge for loading bulk trucks or car lots. Special packing and crating at cost. There will be a charge for special delivery service.

TRIAL GARDENS: We maintain a trial garden with over 200 varieties of roses and one of the largest selections of evergreens in New England for the purpose of giving our customers an opportunity to become familiar with the various varieties of the best hardy types which we have found suitable for this climate.

— **SQUARROSA VAR. K & C**

MOSS RETINOSPORA

A sport of Squarrosa Veitchi first obtained in
our nursery and propagated by us in 1925.
In habit it resembles Obtusa Gracilis, its color
is bluish gray. Plants in our nursery have
withstood a temperature of 15 degrees below
zero, during the winter of 1934-35 without
burning, holding the blue-gray all winter.
A new interesting, picturesque and useful
variety, slow compact grower.

—C. HELLERI, 2' (EVERGREEN)

HELLER'S JAPANESE HOLLY

A dwarf compact variety of Ilex crenata, which assumes a natural low mounded form without shearing. The dark ever-green foliage makes a pleasing contrast when used in combination with flowering shrubs and evergreens. Here is an ideal low-growing evergreen shrub for your garden. Plant it in your shrub border, use it as a low hedge, or find a place for a specimen in your rock-garden or foundation planting.
